Agenda:

- Hugging face : intro
- Demo
- UseCase
- ppt
- QnA

Hugging Face

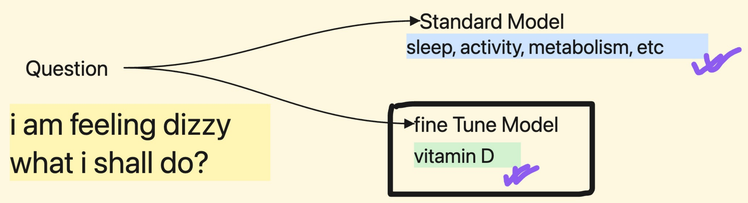

problem statement

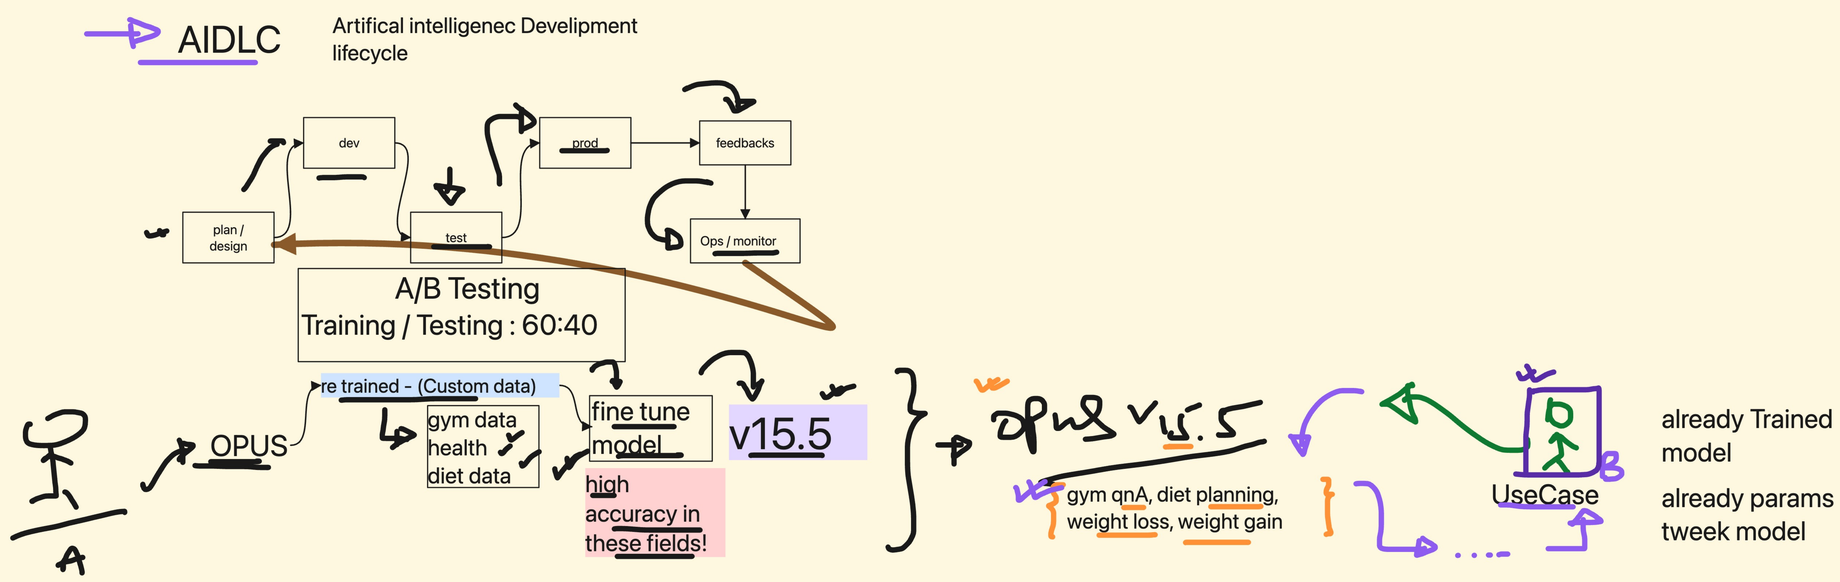

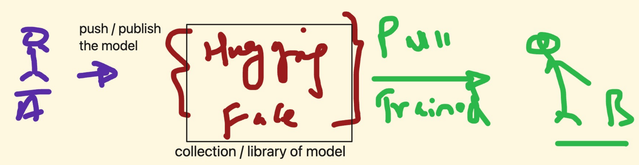

Diff betwen standard model vs fine tune model

standard model : trained on baseline data : no spealised knowledge

fine tune model : trained on custom data : having a spealised knowledge

Why people use it

Don't start from zero. Use a pretrained model instead of training your own.

One consistent interface. Most models load with the same few lines of code.

Community and sharing. Model cards, versioning, and demos in one place.

Free to get started. Downloading public models and datasets is free.

Piece	What it is
Hub (huggingface.co)	A website where people publish and download models, datasets, and Spaces. Every item is a Git repository.
Models	Hundreds of thousands of pretrained models for text, images, audio, video, and more.
Datasets	Ready-to-use data for training and evaluating models.
Spaces	Small hosted apps (Gradio, Streamlit, Docker) for demoing a model in the browser.
`transformers` **library**	The most popular Python library for loading and running models.
`datasets` **library**	Load and process datasets efficiently.
`huggingface_hub` **library**	Download from and upload to the Hub from Python or the CLI.
Inference Providers / Endpoints	Hosted APIs for running models without managing your own hardware.

```
11 10:25:49 2026).
DatasetDict({
    train: Dataset({
        features: ['text', 'label'],
        num_rows: 25000
    })
    test: Dataset({
        features: ['text', 'label'],
        num_rows: 25000
    })
    unsupervised: Dataset({
        features: ['text', 'label'],
        num_rows: 50000
    })
})
```
